

# Create a website for family business Vogue Marine Center

## 1. Introduction

- I want to create a website to show case all of the available options that are customers have available.
- The goal of my project is to get people to be able to look up the business and have all questions answered, they will know how much storage is, they will know what types of spots are available. They will have an option to go on a waiting list for a better spot. And be able to request information as well as pay their rent online.

## 2. Expected list of Features

- Interactive home screen
- Customer review section
- User account to pay bill and make request
- Nav bar to direct to different options available
- List of available spots
- List of pricing for different spots
- List of options we can do for you

## 3. Market survey & references

- <https://nfd-storage.business.site/>
  - I like the simplicity of this site but there is a lot of stuff I feel like could be added to make it a better page.
- <https://www.sunsetboatrv.com/>
  - I want to include a map of the facility like this one has to show off the spots that are available.
  - And I like how it shows features of the website of the first page.
